

Prolog Database with Name and DOB

AIM

To write and execute a Prolog program to create a database containing names and dates of birth and retrieve the required information.

ALGORITHM

1. Start the program.
2. Define facts using the predicate `dob(Name, Date)`.
3. Store the name and corresponding date of birth in the Prolog database.
4. Use a query to retrieve the date of birth of a particular person.
5. Use variables to search for a person based on the date of birth if required.
6. Display the retrieved information.
7. Stop the program.

PROGRAM

```
% Prolog program for database with Name and DOB
```

```
dob(john, '10-05-2000').
```

```
dob(mary, '15-08-2001').
```

```
dob(david, '20-12-1999').
```

```
dob(ann, '25-03-2002').
```

```
dob(peter, '12-07-2000').
```

OUTPUT

```
8 ?- consult(['C:/Users/Lokesh/Desktop/17-33/dob.pl']).  
true.  
  
9 ?- dob(mary,DOB).  
DOB = '15-08-2001'.  
  
10 ?- dob(Name,'20-12-1999').  
Name = david.
```

RESULT

Thus, the **Prolog** program to create and retrieve a database containing Name and DOB was successfully executed, and the required information was obtained successfully.
